Ans. Also called cold blooded animals. Their body temperature changes according surrounding environment. These animals are less active.
e.g. all invertebrates, fishes, amphibians, reptiles.

2. Write two functions of juxtaglomerular apparatus.

Ans. Functions :

- (i) Juxtaglomerular cells secretes Renin which through RAAS (Renin-Angiotensis Aldosterone System) help in absorption of Na^+ from DCT and therefore increases Blood pressure.
- (ii) Its Macula densa cells act as chemoreceptor feeding information to JG cells.

- v) Slow rate of contraction for long period.

White Muscles

- i) Less myoglobin.
- ii) Less in number.
- iii) More sarcoplasmic reticulum.
- iv) Depends mainly on anaerobic respiration.
- v) Fast rate of contraction for short period.
